The image displays three overlapping screenshots of the HomeServices Admin dashboard. The top screenshot shows the 'Overview' page with a sidebar menu and a main content area. The sidebar menu includes 'Overview', 'Companies', 'Independents', 'Workers', 'Clients', 'Bookings', 'Payments', and 'Reviews'. The main content area features a 'Platform-wide numbers across every company, independent and client' section with eight cards: CLIENTS (19), COMPANIES (12, 0 pending review), INDEPENDENTS (12, 0 pending review), WORKERS (15), TOTAL BOOKINGS (48), COMPLETED (21), IN PROGRESS / UPCOMING (18), and PLATFORM EARNINGS (654,24 €, 5,452.00 € gross from completed jobs). Below this is a 'Recent bookings' table with columns for BOOKING, CLIENT, PROVIDER, and SCHEDULED. The bottom screenshot shows the '/companies' page for 'Rüttenscheider Sanitärtechnik GmbH', which is marked as 'Approved'. It includes a 'Business details' section with fields for Legal form, Tax number, Hourly rate, Insured, Vehicle max. volume, Submitted, Commercial register, VAT ID, Crew size, Vehicle type, Long-haul capable, and Approved. The 'Owner / representative' section shows 'Klaus Weber' as 'active' with a 'Suspend account' button. The 'Payout details' section shows 'Status' as 'Not provided', 'Account holder' as 'Confidential', 'IBAN' as 'Confidential', and 'BIC' as 'Confidential'. The rightmost screenshot shows a mobile view of the 'Overview' page, mirroring the top screenshot's layout.

Trust is the product. Without control, it doesn't scale.

Clients book strangers into their homes; partners hand over earnings and personal data. The operator must know — at any moment — who is on the platform, what is happening and what it earns.

Who is on the platform?

Every company and independent must be checked before taking jobs — manually, by e-mail and spreadsheet, that does not scale.

What is happening?

Without one view, problems with bookings, cancellations or reviews surface late — and only when customers complain.

What does it earn?

Gross volume, fees and payouts spread across tools make the business impossible to steer.

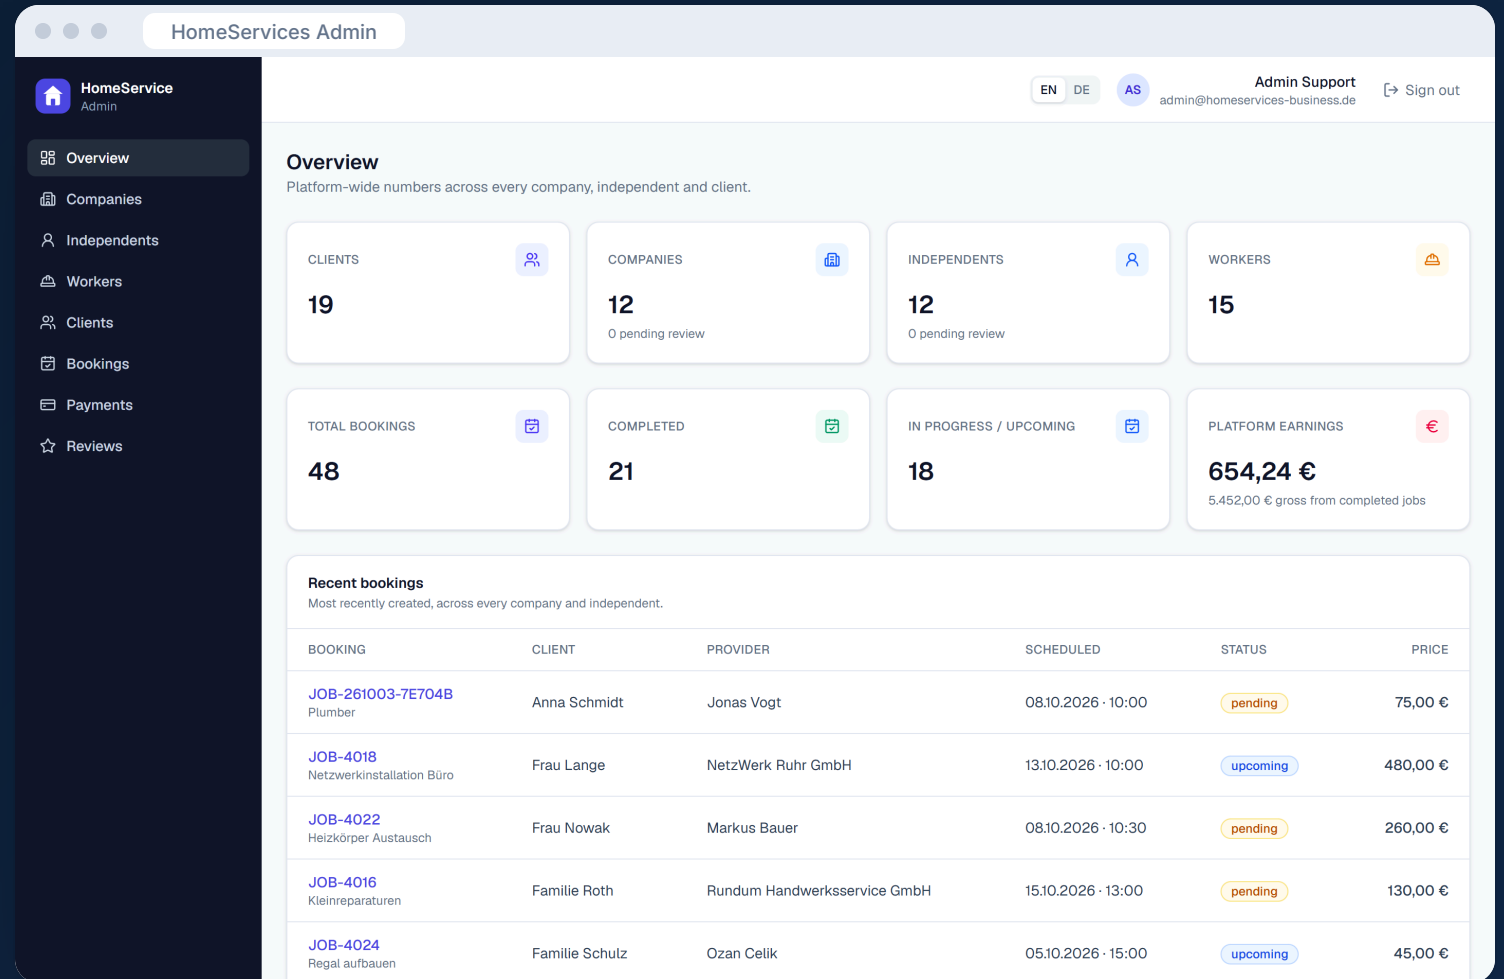

Is data safe?

Banking and personal data in the wrong hands is a compliance and reputation risk.

The whole platform in one screen.

- ✓ **Platform-wide KPIs:** clients, companies, independents and workers
- ✓ **Booking funnel:** total, completed, in progress / upcoming
- ✓ **Platform earnings** with the gross volume they come from
- ✓ **Pending reviews** of new companies and independents at a glance
- ✓ **Recent bookings** across every provider

— ONBOARDING & APPROVALS

Only vetted partners go live.

- ✓ **Application queue** for companies and independents with status filters
- ✓ **Business detail view:** legal form, tax number, VAT ID, rates, address, representative
- ✓ **Approve or reject** with one click; **suspend** accounts when needed
- ✓ **Activity per partner:** bookings, completed jobs, gross volume and net payout

The image displays two overlapping screenshots of the HomeServices Admin web application. The top screenshot shows the 'Companies' overview page, which lists registered companies with their onboarding status. The bottom screenshot shows the detailed view for 'Rüttenscheider Sanitärtechnik GmbH', including business details, activity statistics, owner information, and payout details.

Payments are currently simulated; a payment-service-provider integration (e.g. Stripe Connect) is the first item on the launch roadmap.

Quality you can measure and enforce.

- ✓ **All client reviews** in one list with rating, provider and booking
- ✓ **Spot problems early:** low ratings point to partners who need support
- ✓ **Find your stars:** identify the top performers worth growing with
- ✓ **Feedback loop** into approvals and suspensions

Built so sensitive data stays where it belongs.

Admin-only access

Dashboard routes are protected by a server-side gate; only users with the admin role can sign in and call admin endpoints.

Tokens never reach the browser

A backend-for-frontend keeps tokens in httpOnly cookies, so scripts in the page can never read them.

No banking data in the admin API

IBAN, BIC and bank name are encrypted at rest (AES-256-GCM) and shown only as "Confidential".

Validated and tested

Schema-validated input and 34 automated integration tests cover authentication, bookings and the admin workflow.

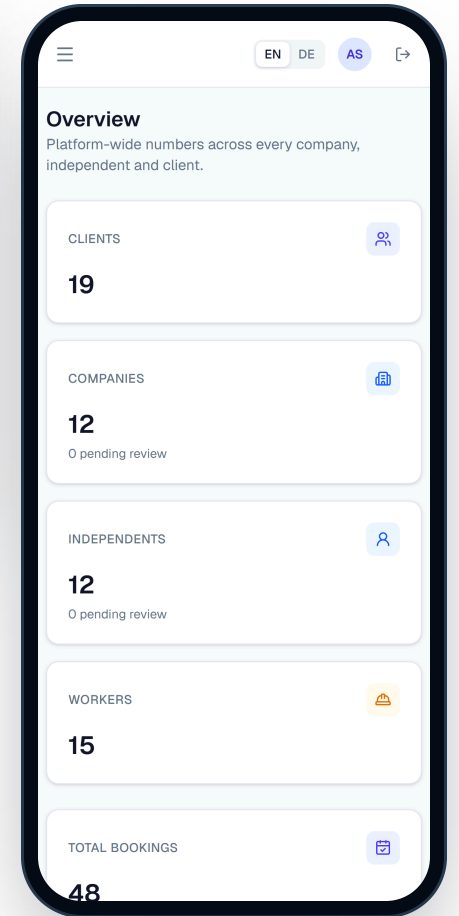

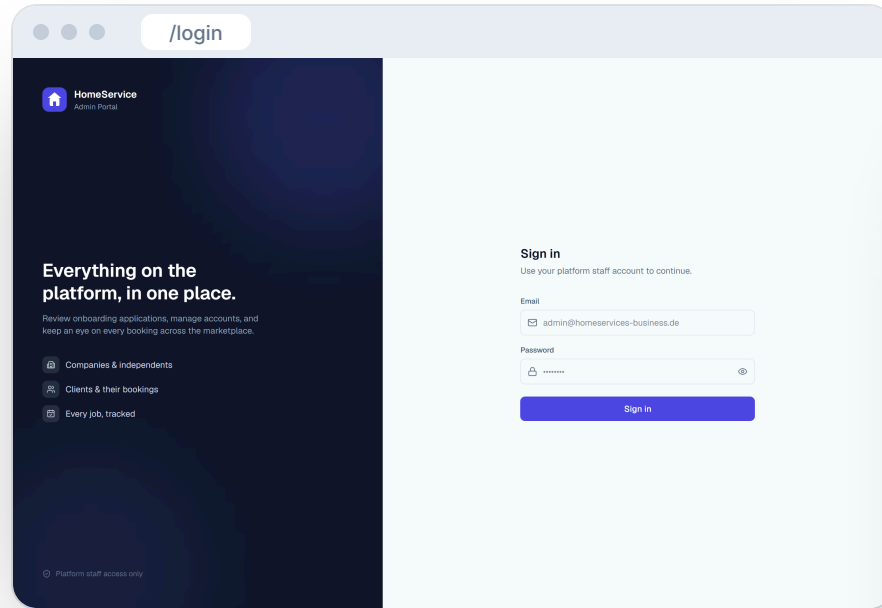

Compliance-minded: data minimisation and confidentiality are product decisions, not afterthoughts — a solid base for GDPR-conform operations in the EU.

— MODERN, BILINGUAL, RESPONSIVE

Built for the way operations teams work.

- ✓ **English / German** switch in the header, remembered between visits
- ✓ **Fully responsive:** the same dashboard works from desktop to phone
- ✓ **Clean, fast interface** built with Next.js, TypeScript and Tailwind
- ✓ **Consistent design system:** tables, filters, badges and detail pages

We solve a real problem for **everyone** in the chain.

Clients

THE PROBLEM

Finding a reliable pro is slow, prices are opaque, emergencies are stressful.

OUR ANSWER

Verified providers, upfront prices, 24/7 emergency booking, chat, reviews.

Companies

THE PROBLEM

Dispatch by phone and WhatsApp, no overview of jobs, team and earnings.

OUR ANSWER

One dashboard: jobs, assignment, team workload, earnings after fees.

Coworkers

THE PROBLEM

Unclear schedules, paper reports, no view of what they earn.

OUR ANSWER

A personal schedule, only their own jobs, their own earnings — nothing more.

Independents

THE PROBLEM

Great craft, but no time for marketing, booking and admin.

OUR ANSWER

Bookings come to them; the same app runs the schedule, earnings and profile.

Platform admin

THE PROBLEM

Quality and trust break without governance and visibility.

OUR ANSWER

Approval workflow, account control, booking oversight, revenue view.

Every booking creates value for all five at once

Small team. Big marketplace.

The admin dashboard is how a lean operations team keeps quality high and costs low while volume grows.

Protect quality

Approval workflow and reviews keep the supply side trustworthy — the foundation of repeat bookings.

Steer by data

Volume, completion and fees are visible in real time, so decisions do not wait for month-end reports.

Scale efficiently

One web console for support, onboarding and finance checks — no spreadsheets, no manual data pulls.

EXAMPLE FROM THE DEMO DATASET (NOT LIVE DATA)

48

bookings tracked

21

completed

€5,452

gross volume of completed jobs

€654

platform earnings (12%)

We earn when work gets done — 12% of every completed booking.

The admin console is the cost-efficient engine of the marketplace: it lets a small team govern many partners, and it makes the revenue — a fixed 12% of each completed booking — visible and auditable.

HOW A €100 BOOKING SPLITS

Net to the company / independent

Platform fee

- ✓ **Performance-based:** no booking, no fee.
- ✓ **Transparent:** the fee is shown as its own line item, in every app.
- ✓ **Gross prices include 19% VAT** — what clients see is what they pay.

ILLUSTRATIVE SCALE MODEL — assumptions, not a forecast

STAGE	PARTNERS	JOBS / MO. EACH	Ø BOOKING	ANNUAL FEES
Pilot city	100	20	€120	€345,600
Regional	500	25	€130	€2.34 M
Multi-city	2,500	30	€140	€15.12 M

Annual fees = partners × jobs × 12 months × average booking × 12%. Illustrative arithmetic to show how the model scales — not a financial forecast. Ancillary streams (premium partner tools, B2B accounts, advertising) are not included.

— THE MARKET

A giant, fragmented market that still runs on phone calls.

Germany's craft sector is the backbone of local home services — and most of it is organised in small, independent businesses with little digital infrastructure between them and their customers.

1.04 M

registered craft businesses in Germany

5.6 M

people employed in the craft sector

€771 bn

annual turnover (excl. VAT)

342 k

apprentices — the next generation of providers

≈ 5 people per business on average (5.6 M employees across 1.04 M businesses) — too small to build their own booking, dispatch and payment stack.

Our entry point: a regional launch in one metro area and ten everyday categories, expanding city by city.

Source: ZDH (Zentralverband des Deutschen Handwerks), "Wirtschaftlicher Stellenwert des Handwerks 2024" — [zdh.de](https://www.zdh.de). Turnover excludes VAT.

A copilot for the operations team.

For the operator, AI is a copilot: it reads, flags and summarises so people only decide. Nothing is approved, rejected or paid out automatically without human sign-off.

Onboarding checks

Read uploaded documents, validate VAT IDs and flag inconsistencies before an admin reviews an application.

Fraud & anomaly alerts

Detect unusual cancellations, price patterns and duplicate accounts.

Review moderation

Spot fake, abusive or off-topic reviews and summarise feedback per partner.

Ask your data

"Cancellations in Essen last week?" — natural-language analytics over bookings and payments.

Supply & demand

Forecast demand by category and region and show where partners are missing.

Why we can build it: every approval, booking, payment and review already flows through one structured API and database, which makes it straightforward to add analytics and assistive models without changing the apps.

A solid core today — a clear path to launch and scale.

DONE

Built today

- › Customer app (EN/DE/FR), partner app (EN/DE), admin dashboard (EN/DE)
- › Secure REST API, MySQL schema, role-based access
- › Booking lifecycle, notifications, chat, reviews
- › Emergency booking & relocation planner
- › 34 automated integration tests

LAUNCH READINESS

Next · 0–6 months

- › Audit log of every admin action
- › Document upload & verification in the approval flow
- › Finance and support roles with scoped permissions
- › Production hosting, CI/CD and monitoring

SCALE

Then · 6–12 months

- › Automatic invoices with VAT & payout statements
- › In-app quotes and calendar sync for partners
- › Review moderation & dispute handling
- › More cities and categories; analytics for partners

DIFFERENTIATE

Vision · 12–24 months

- › AI matching, scoping and dispatch
- › Premium partner tools & B2B accounts (property managers, housing)
- › Partner API and integrations
- › Expansion across DACH and the EU

Run a marketplace with confidence — from day one.

The admin console already covers approvals, oversight, revenue and privacy. We are looking for partners to bring the platform to its first launch region.

Pilot operators

Teams who want to run the platform in a launch region with us.

Investors

Capital for launch, compliance tooling and the operator-side AI copilot.

Compliance partners

Legal, tax and payment partners for a regulated roll-out.

A live, click-through demo of the working product is available on request.
